## Record Work Hours Automatically

Trainees can now record work hours automatically. Simply sign in to the the ResQ app once and let it do the work. The app automatically senses arrival and departure from any WorkZone™ and records those hours. If you are an existing MedHub customer, upon exit, the recorded hours automatically sync to your trainees Duty Hours module within MedHub.
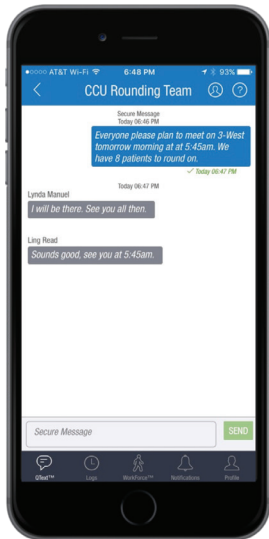

It's Effortless. Log In by Walking In.

## A Smarter Way to Record Duty Hours

ResQ streamlines the process of duty hour logs by reducing time spent on administrative work and eliminating the process of data entry. Both physicians and administrators have better things to think about than paperwork.

# Time Logs & Reporting

ResQ not only simplifies the lives of residents, but also administrators, attendings, and nurses - all while in compliance with ACGME guidelines.
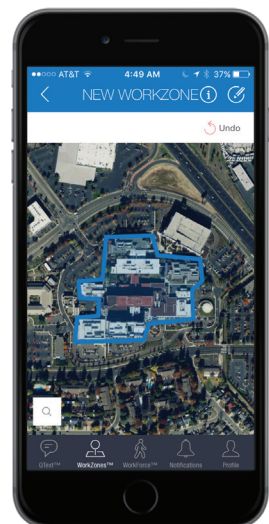

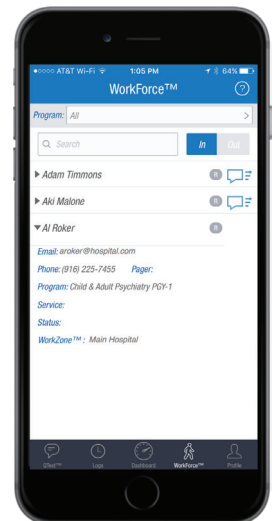

# Secure Messaging

Medical staff spend 15% of their day locating doctors. ResQ is here to help. The ResQ app can be used as a communication tool that is linked to the WorkForce™ feature. Secure messaging within the app facilitates communication and work flow. Messages can be sent securely to any ResQ user. Messages are encrypted and can be set to automatically delete after a preset period of time.

# WorkForce

WorkForce enables a real-time understanding of staff location to streamline medicine and prepare for emergency situations.

# WorkZones

A WorkZone™ is a virtual boundary. Administrators can create WorkZones™ around any hospital, clinic, or surgery center setting. There is no limit to the number of WorkZones™ that can be created.
